

Trace-X

Money-Trail Investigation Cockpit

Maharashtra Cyber / Mumbai Police · Training Prototype

Internal tool for investigating officers after a complaint is known on 1930 / NCRP / CFCFRMS.

See multi-hop money trails · spot reused mule accounts across cases · store evidence · draft BNSS notices · track SLAs.

Does NOT replace 1930 / NCRP. Not live bank freeze. Synthetic training data.

What it is · Why it exists

Problem

After a cyber complaint is registered, officers still rebuild multi-hop bank trails in Excel, miss reused mule accounts across files, and draft notices by hand. Time is lost in the golden window.

What Trace-X does

- Ingest bank hop replies (CSV/XLSX) into a case graph
- Visual money-trail with layers, splits, dead-ends, mule tags
- Deterministic risk rules (repeat mule, velocity, layer depth)
- Cross-case pattern / mule-ring detection
- Evidence locker + append-only audit trail
- BNSS-style notice drafts (legal review still required)
- Helpline intake console for freeze-critical fields (training)
- Supervisor dashboard: open cases, SLA breaches, workload

Ready today vs not claimed

READY (prototype)

- Case + trail graph
- Risk + related cases
- Mule rings / watchlist
- Notices (DRAFT)
- Evidence + audit
- Helpline intake (sim)

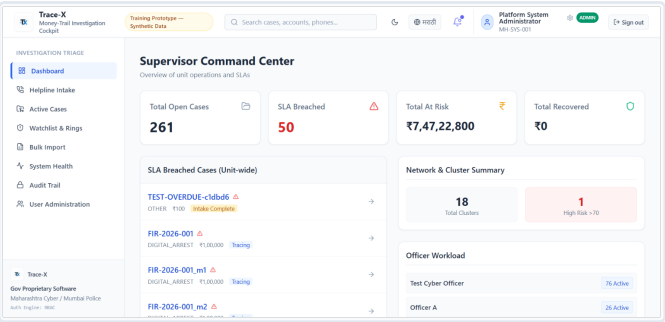

NOT CLAIMED

- Live 1930 trunk
- Live CFCFRMS feed
- Live bank freeze API
- Production .gov.in host
- Legal notice sign-off
- Band-B production

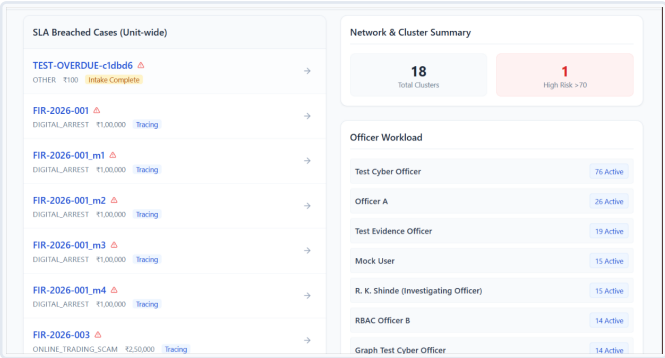

1 · Supervisor Command Center

1 · Supervisor Command Center

Unit overview: open cases, SLA breaches, amount at risk, officer workload. Why: command visibility without opening every Excel file.

Dashboard KPIs and SLA list

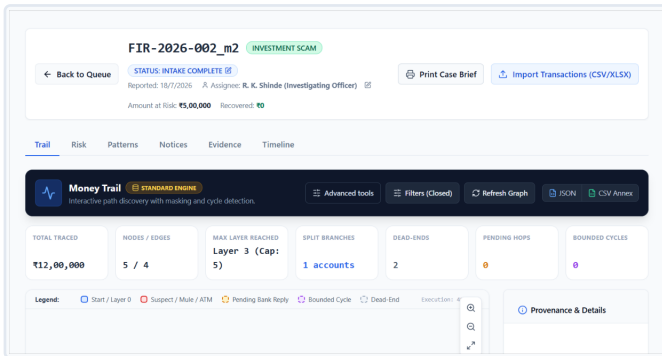

SLA breaches · clusters · workload

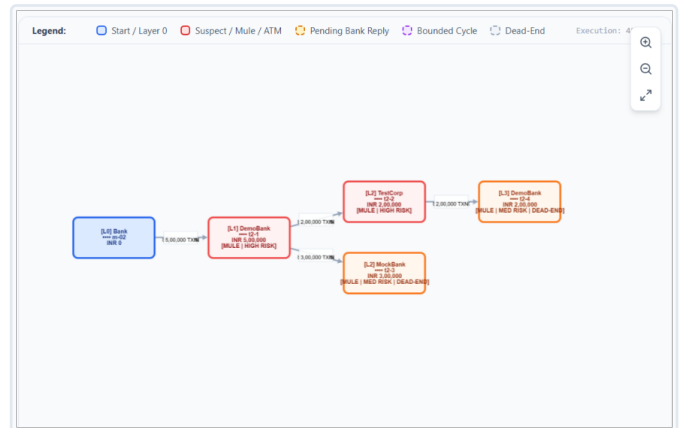

2 · Money Trail Graph

2 · Money Trail Graph

Interactive multi-hop path: layers, splits, mule tags, dead-ends. Why: officer sees the trail instead of rebuilding hops manually.

Case header + trail metrics

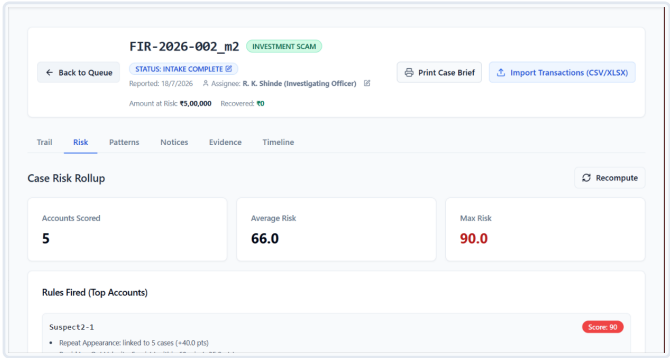

Layered hop graph with mule / dead-end tags

3 · Risk Scoring (Rules, Not Black-Box AI)

3 · Risk Scoring (Rules, Not Black-Box AI)

Deterministic rules: repeat appearance across cases, rapid in→out velocity, layer depth. Why: explainable priority for IO and supervisor.

Case risk rollup

Rules fired per account

4 · Cross-Case Patterns

Auto-links related FIRs sharing accounts. Why: catch reused mules that separate Excel sheets miss.

5 · BNSS Notice Drafts

5 · BNSS Notice Drafts

Generate Section 94 / 168 / 106 style drafts from case context. Why: faster paperwork; watermark / legal review still required.

Generate draft notice

6 · Evidence Locker

Upload proofs, link to notice/transaction, chain-of-custody style storage. Why: keep investigation artefacts with the case.

Evidence upload + locker

Training prototype · Synthetic data · Not a live 1930 / NCRP / bank freeze claim

8 / 13

7 · Helpline Intake Console

Training call desk: capture freeze-critical fields in the golden window, proofs, convert to case. Why: process demo before live 1930 trunk.

8 · Mule Rings & Bulk Ingest

8 · Mule Rings & Bulk Ingest

Auto-detected rings across cases + CSV/XLSX bank-reply ingestion into the graph. Why: scale from one hop file to network view.

Network & Intelligence

Cross-case pattern detection, mule rings, and PSP exposure.

9 · Health, Audit & Marathi UI

9 · Health, Audit & Marathi UI

Ops health (Postgres / Neo4j / Redis), immutable audit trail (IT Act / BNSS posture), bilingual EN–MR UI. Why: governable prototype for police use.

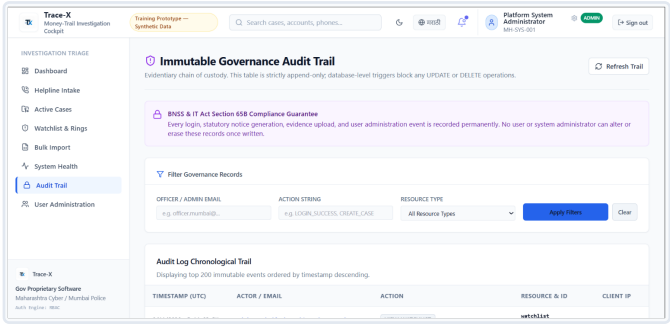

System health cockpit

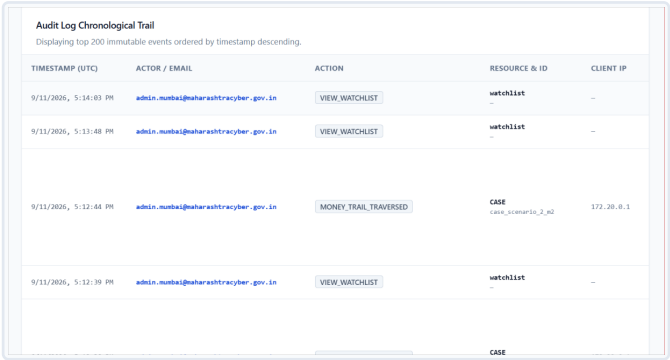

Marathi supervisor view + alerts

10 · Immutable Audit Trail

Append-only governance log of logins, trail views, notices, evidence. Why: accountability for every sensitive action.

Audit trail screen

Chronological immutable events

Ask · Next step

What we ask

Authorise a short pilot on 5–10 closed cases with one champion IO, one supervisor, and legal review of notice wording. Success = time-to-usable trail vs Excel.

After pilot approval

- Official department / Cyber Cell hostname (not personal pilot domain)
- Staging with TLS + locked access
- Legal cell sign-off on BNSS notice templates
- Discuss bank / NCRP / CFCFRMS integration path with Cyber IT
